## Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Kindly cancel claims 1 - 7 without prejudice, in favor of new claims 8 - 16.

Claims 1 - 7. (Cancelled)

8. (New) In a process for the preparation of release films and coatings on a substrate by applying a primer to the substrate and then applying a silicone release coating, the improvement comprising,

selecting as a primer, at least one silane-containing polyvinyl alcohol derived from fully or partly hydrolyzed vinyl ester copolymers having a degree of hydrolysis of 75 to 100 mol%, obtained by free-radical polymerization of

- a) one or more vinyl esters of unbranched or branched alkylcarboxylic acids having 1 to 18 carbon atoms, of which a fraction of 1 to 30 mol%, based on total polymer, are one or more 1-alkylvinyl esters of carboxylic acids having 1 to 6 carbon atoms, wherein the alkyl radicals have 1 to 6 carbon atoms,
- b) 0.01 to 10 mol% of one or more silane-containing, ethylenically unsaturated monomers, and, optionally,
- c) further comonomers copolymerizable therewith, and hydrolyzing the resultant polymers.
- 9. (New) The process of claim 8, wherein the silane-containing polyvinyl ester copolymer is a copolymer of vinyl acetate.
- 10. (New) The process of claim 8, wherein said 1-alkylvinyl esters are selected from the group consisting of 1-methylvinyl acetate, 1-ethylvinyl acetate, and 1-propylvinyl acetate, and mixtures thereof.

- 11. (New) The process of claim 8, wherein the silane-containing polyvinyl alcohol is obtained by copolymerizing one or more ethylenically unsaturated, silane-containing monomers selected from the group consisting of ethylenically unsaturated silicon compounds of the formula (I)  $R^1SiR^2_{0.2}(OR^3)_{1.3}$ , where  $R^1$  is  $CH_2 = CR^4 (CH_2)_{0.3}$  or  $CH_2 = CR^4CO_2(CH_2)_{1.3}$ ,  $R^2$  is a  $C_1$  to  $C_3$  alkyl radical,  $C_1$  to  $C_3$  alkoxy radical, or halogen,  $R^3$  is an unbranched or branched, unsubstituted or substituted alkyl radical having 1 to 12 carbon atoms, or is an acyl radical having 2 to 12 carbon atoms,  $R^3$  optionally interrupted by an ether group, and  $R^4$  is H or  $CH_3$ , and meth(acrylamides) containing silane groups, of the formula (II)  $CH_2 = CR^5 CO-NR^6 R^7 SiR^8_{m^-}(R^9)_{3-m}$ , where m=0 to 2,  $R^5$  independently is H or a methyl group,  $R^6$  is H or an alkyl group having 1 to 5 carbon atoms,  $R^7$  is an alkylene group having 1 to 5 carbon atoms or a divalent organic group in which the carbon chain is interrupted by an O or N atom,  $R^8$  is an alkyl group having 1 to 5 carbon atoms, and  $R^9$  is an alkoxy group having 1 to 40 carbon atoms, optionally substituted by heterocycles.
- 12. (New) The process of claim 11, wherein the silane-containing polyvinyl alcohol is obtained by copolymerizing one or more ethylenically unsaturated, silane-containing monomers selected from the group consisting of  $\gamma$ -acryloyl- and  $\gamma$ -methacryloyl-oxypropyltri(alkoxy)silanes,  $\alpha$ -methacryloyloxymethyltri(alkoxy)silanes,  $\gamma$ -methacryloyloxypropylmethyldi(alkoxy)silanes, vinylalkyldi(alkoxy)silanes, and vinyltri(alkoxy)silanes.
- 13. (New) The process of claim 12, wherein at least one alkoxy group is selected from the group consisting of methoxy, ethoxy, methoxyethyleneoxy ethoxyethyleneoxy and ethoxypropyleneoxy radicals.
- 14. (New) The process of claim 8, wherein 0.01 to 1.5 mol% of ethylenically unsaturated, silane-containing monomers are copolymerized.
- 15. (New) A release film or paper, comprising: a substrate, a primer coat applied to the substrate, and a silicone release coating applied over the primer, wherein the primer comprises a primer of claim 8.

16. (New) A release film or paper comprising a substrate, a primer coat applied to the substrate, and a silicone release coating applied over the primer, wherein the primer comprises at least one silane-containing polyvinyl alcohol derived from fully or partly hydrolyzed vinyl ester copolymers having a degree of hydrolysis of 75 to 100 mol%, obtained by free-radical polymerization of

- a) one or more vinyl esters of unbranched or branched alkylcarboxylic acids having 1 to 18 carbon atoms, of which a fraction of 1 to 30 mol%, based on total polymer, are one or more 1-alkylvinyl esters of carboxylic acids having 1 to 6 carbon atoms, wherein the alkyl radicals have 1 to 6 carbon atoms,
- b) 0.01 to 10 mol% of one or more silane-containing, ethylenically unsaturated monomers, and, optionally,
- c) further comonomers copolymerizable therewith, and hydrolyzing the resultant polymers.
